The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply							
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). - Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). Status							
1)⊠	Responsive to communication(s) filed on 28.	January 2002 .					
2a)⊠	This action is FINAL. 2b) Th	nis action is non-fi	nal.	•			
3)	3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under <i>Ex parte Quayle</i> , 1935 C.D. 11, 453 O.G. 213.						
Disposition of Claims							
4)⊠ Claim(s) <u>1-11</u> is/are pending in the application.							
4a) Of the above claim(s) is/are withdrawn from consideration.							
5) Claim(s) is/are allowed.							
6)⊠	6)⊠ Claim(s) <u>1-11</u> is/are rejected.						
7) ☐ Claim(s) is/are objected to.							
8)	Claim(s) are subject to restriction and/o	r election require	ment.				
Applicati	on Papers						
9) The specification is objected to by the Examiner.							
10)☐ The drawing(s) filed on is/are: a)☐ accepted or b)☐ objected to by the Examiner.							
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).							
11) ☐ The proposed drawing correction filed on is: a) ☐ approved b) ☐ disapproved by the Examiner.							
If approved, corrected drawings are required in reply to this Office action.							
12)☐ The oath or declaration is objected to by the Examiner.							
Priority under 35 U.S.C. §§ 119 and 120							
13) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).							
a) ☐ All b) ☐ Some * c) ☐ None of:							
1. Certified copies of the priority documents have been received.							
	2. Certified copies of the priority documents have been received in Application No						
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)). * See the attached detailed Office action for a list of the certified copies not received. 							
14) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).							
a) ☐ The translation of the foreign language provisional application has been received. 15)☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Art Unit: 2672

DETAILED ACTION

- This action is responsive to communications filed on 1/28/02.
 This action is final.
- Claims 1-11 are pending in this application. Claim 1 is independent claim.
 This application claims foreign priority dated 7/17/97.
- 3. The present title of the invention is "Graphic Image Texture Generation" as filed originally.

Claim Rejections - 35 USC § 103

- 4. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
- 5. Claims 1-4, 7, 9 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over <u>Kamen</u> et al. (5,812,141) in view of Jenkins (6,111,582).

As per claim 1, <u>Kamen</u> et al., hereinafter <u>Kamen</u>, disclose an apparatus for texture mapping in a computer graphics system (as illustrated in Figure 4), using a predetermined set of standardized textures (Figure 4; 30), the apparatus having an input (Figure 4; 92) to receive via a network identifying data identifying one of the set of standardized textures (the control signal 92, column 6, line 24), and means for processing the data to generate output texels of the identified textures (Figure 4; 4), wherein each texture of the standardized set is a procedural texture, the identifying data

Art Unit: 2672

comprises one or a sequence of program commands, the execution of which will result in the generation of a respective procedural texture, with the means for processing data comprising a processor operable to implement all such input program commands or sequences of input program commands as required to generate the procedural texture of the standardized set (column 6, line 26 - 36).

It is recognized that, in Figure 4, <u>Kamen</u> uses texture lookup table for texture determination, however, he also discloses in column 2, line 31 – 39 that the texture can also be derived by the means of procedural texturing.

Although Kamen disclose the input (92) is connected to a bus (42), it is noted that Kamen does not explicitly disclose the identifying data is received via a network, however, this is known in the art as taught by Jenkins. Jenkins discloses an image generation method in which "Texture information can be pre-transmitted from the server to the client or transmitted at other scheduled times. Transmitted texture information includes conventional maps as well as parameters for procedural methods of texture synthesis which are then generated by the client. Alternatively, transmitted primitives can refer to materials and textures from prestored libraries of textures maintained by the client. The use of procedural textures and prestored texture libraries reduces the required client-server connection bandwidth. The use of prestored texture libraries allows the user to modify the appearance of the model by selecting texture preferences.", column 85, line 47-58.

Art Unit: 2672

Thus, it would have be obvious to one of ordinary skill in the art to incorporate the teaching of Jenkins into Kamen in order to reduces the required client-server connection bandwidth.

- 6. As per claim 2, the input control signals are plural (column 10, line 14 18).
- 7. As per claim 3, <u>Kamen</u> discloses his control signals include quality of texture (column 11, line 47 54).
- 8. As per claim 4, <u>Kamen</u> discloses, in his texture mapping controller, a computation method selection device (column 10, line 31 49) to generate pixel value. It is obvious that his method can also be used to generating procedural textures of the standardized set.
- 9. As per claim 7, it is notoriously known in the art (Officially noted) that a processor of many elements can be fabricated onto a single substrate for the purposes of increased processing speed and reducing power and cost.
- 10. As per claim 9, the input to <u>Kamen</u>'s apparatus (Figure 4; 42) are lines and polygons (column 6, line 25 26). Since <u>Kamen</u> talks about texture in terms of "viewpoint", "perspectives" and "coordinate space" (column 1, lines 45 and 60), it is obvious that <u>Kamen</u> is talking about 3-dimensional polygons. <u>Kamen</u> also discloses means to convert 3-D data into 2-D (Figure 4; 2, 3), program command (Figure 4; select signal), and rendering means (Figure 4; 34, 28 and 6) to generate an output image with texture applied.

Art Unit: 2672

- 11. As per claim 10, it is well known in the art (Officially noted) that the polygon data and program commands can be stored in remote location and its location stored in a local memory to be retrieved at a later time.
- 12. Claims 5-6 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over <u>Kamen</u> et al. and Jenkins as applied to claims 1 above, and further in view of <u>Griffin</u> et al. (5,880,737).

As per claim 5, <u>Kamen</u> and Jenkins disclose a texture mapping apparatus with procedural texture and control signals. It is noted that <u>Kamen</u> and Jenkins do not disclose using a cache to store texture maps, however, this is known in the art as taught by <u>Griffin</u> et al., hereinafter <u>Griffin</u>. <u>Griffin</u> discloses that in order to reduce latency in memory accessing, textual samples can be stored in the texture cache (column 18, line 35 – 39).

It would have been obvious to one of ordinary skill in the art at the time of invention to include a texture cache as in <u>Griffin</u> into the invention of <u>Kamen</u> and Jenkins to reduce memory access latency.

- 13. As per claim 6, <u>Kamen</u> discloses his texture mapping apparatus has control for texture quality (column 11, line 47 54). It is notoriously known in the art (Officially noted) to place an interpolator after the texture map for refining the texture quality.
- 14. As per claim 8, it is notoriously known in the art (Officially noted) that a processor of many elements can be fabricated onto a single substrate for the purposes of increased processing speed and reducing power and cost.

Art Unit: 2672

15. Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over <u>Kamen</u> et al. and Jenkins as applied to claim 1 above, and further in view of <u>Tremblay</u> et al. (5,925,123).

As per claim 11, <u>Kamen</u> and Jenkins disclos an apparatus with texture rendering means and control signals. It is noted that <u>Kamen</u> and Jenkins do not explicitly teaches the program commands are transmitted over the network in virtual machine code and a processor to convert the program commands to local machine codes, however, this is known in the art as taught by <u>Tremblay</u> et al., hereinafter <u>Tremblay</u>. <u>Tremblay</u> discloses a processor (Figure 6B; 635) to decode instruction transmitted over the network and convert it to local machine code.

It would have been obvious to one of ordinary skill in the art at the time of invention to include a processor locally as taught in Tremblay into the invention of <a href="Maintenance Eastern Common Processor Invention of Inventi

Response to Arguments

16. Applicant's arguments with respect to claims 1-11 have been considered but are most in view of the new ground(s) of rejection.

The applicant also argues that the Kamen teaching do not disclose the use of standard texture. The standard texture is defined in the invention as "a local library of

Art Unit: 2672

the standard texture in the form of a collection of texture maps", page 2, line 22-23, which the texture lookup (Figure 4 30) of Kamen teaching certainly qualify as such.

Conclusion

- 17. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
- 18. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Inquiries

Art Unit: 2672

19. Any inquiry concerning this communication or earlier communications from the examiner should be directed to **Ryan Yang** whose telephone number is **(703) 308-6133**.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, **Michael Razavi**, can be reached at **(703) 305-4713**.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks

Washington, D.C. 20231

or faxed to:

(703) 872-9314 (for Technology Center 2600 only)

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive, Arlington, VA, Sixth Floor (Receptionist).

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Technology Center 2600 Customer Service Office whose telephone number is (703) 306-0377.
